### **Proposed Amendment**

1. (currently amended) A computer-implemented system for controlling the appearance of a data entry form on a display to which the system is connected for use in entering data into a database, the system comprising a storage for storing attribute data defining attributes of a data entry form having at least one data entry field and, for the at least one data entry field, storing a plurality of data values and, for each of the plurality of data values, storing corresponding attribute data defining a different set of data entry fields for each of the plurality of data values ~~at least one further data entry field~~; and a controller for causing the data entry form to be displayed on a display in accordance with the stored attribute data, and for monitoring data values entered into said at least one data entry field, and, in response to entry of a value into the at least one data entry field that matches one of the plurality of stored data values, displaying the set of data entry fields ~~at least one further data entry field~~ that corresponds to the value entered into the at least one data entry field according to the attribute data defining the set of data entry fields ~~at least one further data entry field~~.
